PERMIT TO ALLOW MINOR USE OF AN AGVET CHEMICAL PRODUCT

FOR CONTROL OF VARIOUS LEAF AND FRUIT FUNGAL DISEASES IN OLIVES

PERMIT NUMBER - PER11360

This permit is issued to the Permit Holder in response to an application granted by the APVMA under section 112 of the Agvet Codes of the jurisdictions set out below. This permit allows a person, as stipulated below, to use the product in the manner specified in this permit in the designated jurisdictions. This permit also allows any person to claim that the product can be used in the manner specified in this permit.

THIS PERMIT IS IN FORCE FROM 24 MARCH 2009 TO 30 NOVEMBER 2021

Permit Holder:
AUSTRALIAN OLIVE ASSOCIATION LTD
C/O HORTICULTURE INNOVATION AUST LTD
SUITE 2, LEVEL 5,
87 WICKHAM TERRACE,
BRISBANE QLD 4003

Persons who can use the product under this permit:
Persons generally
CONDITIONS OF USE

Product to be used:
ALL REGISTERED PRODUCTS
Containing: 300 g/kg, 350 g/kg, 375 g/kg, 400 g/kg or 500 g/kg COPPER present as CUPRIC HYDROXIDE as their only active constituent.

ALL REGISTERED PRODUCTS
Containing: 400 g/L, 500 g/kg or 750 g/kg COPPER present as CUPROUS OXIDE as their only active constituent.

ALL REGISTERED PRODUCTS
Containing: 190 g/L or 200 g/kg COPPER present as TRIBASIC COPPER SULPHATE as their only active constituent.

Directions for Use:

RESTRAINTS
- DO NOT apply when temperatures exceed 35° C, or when frost prone conditions prevail.
- DO NOT apply if rain is imminent.
- DO NOT apply when slow drying conditions prevail.
- DO NOT apply to wet crops.

Mix Rate of Product with Water

Critical Use Comments:
- Read the product label carefully and adhere to all restraints and instructions on application.
- Copper sprays are best applied prior to the onset of conditions conducive to disease (i.e. warm, humid, wet weather).
- Lower rates should be effective for disease management. For groves in coastal areas, or groves with a history of fungal disease, or the season is more conducive to fungal activity, the higher rate would be more appropriate.
- Regular sprayings should be considered to protect the quality of the fruit on the trees.

Comments on product label for treatment of fungal diseases on other tree crops should be noted as a guide.
• Apply to the point of runoff using medium to coarse droplet size in accordance with ASAE S572 “Spray Nozzle Classification by Droplet Spectra”
• Product formulations may already contain a wetting agent. However if leaf coverage appears patchy, then a small amount of a wetting agent should be considered. Refer product label recommendations on suitable wetting agent.

Withholding Period:
DO NOT harvest for 1 DAY after final application.

Jurisdiction:
ACT, NSW, QLD, SA, TAS, NT and WA only.
(Note: Victoria is not included in this permit because their ‘Control-of-Use’ legislation means that a permit is not required to legalise this off-label use in VIC).

Additional Conditions:
This PERMIT provides for the use of a product in a manner other than specified on the approved label of the product. Unless otherwise stated in this permit, the use of the product must be in accordance with instructions on its label.

PERSONS who wish to prepare for use and/or use the products for the purposes specified in this permit must read, or have read to them, the permit particularly the information included in Details of Permit and Conditions of Permit.

To avoid host damage:
The sensitivity of foliage and fruit of all olive cultivars to be treated under this permit has not been fully evaluated, particularly at the high rate of copper application specified. It is advisable, therefore, to only treat a small number of olive trees to ascertain their reaction before treating part or the whole of a grove. It is important to adhere to the restraints and conditions of use listed on this permit and on the product label to minimise any potential risk of host damage.

Issued by the Australian Pesticides and Veterinary Medicines Authority

Note: 7/3/2012. Permit amended to include additional products containing COPPER present as CUPRIC HYDROXIDE or CUPROUS OXIDE or TRIBASIC COPPER SULPHATE. Restraints and Critical Use Conditions and Additional Conditions revised. Permit extended to 31 March 2017. Permit version 2 issued 7 March 2012.
