Critical Use Comments:

Apply by ground application only e.g. knapsack, powered hand-gun, boom, air-assisted.
Apply in sufficient volume to ensure thorough coverage of all plant surfaces.

Treat a sample area and assess appropriately prior to whole crop treatment to help minimise potential for phytotoxic damage. This action cannot guarantee crop safety as application, environmental and crop conditions may vary from test treatment to whole of crop treatment. This is particularly important for crops in bloom.

DO NOT apply more than 2 consecutive applications of a chemical from the same chemical class (Mode of Action Group). Rotate approved products from different chemical mode of action groups at regular intervals within a structured disease management plan.

For interstate quarantine requirements:

Apply in accordance with the procedures outlined in the appropriate State Import Requirement or Interstate Certification Assurance (ICA) Document. DO NOT apply the same chemical (or chemical class) on despatch that will be used by an importing authority for decontamination on receipt.

Resistance management strategy:

Fungicide	Activity	Chemical group	Minimum re-treatment interval between consecutive applications
TRIADIMENOL	Systemic, curative and protectant	3	14-21 days
TRIFORINE	Systemic, slightly curative and protectant	3	7 days
MANCOZEB	Protectant	M3	7 days
AZOXYSTROBIN	Slightly curative and protectant	11	14-21 days
COPPER OXYCHLORIDE	Protectant	M1	7-14 days
OXYCARBOXIN	Systemic, curative and protectant	7	14 days
PROPICONAZOLE	Systemic, curative and protectant	3	7 days

Jurisdiction:

All States
