Critical Use Comments:

- Apply when conditions favour disease development but before disease is evident.
- Apply two consecutive applications at 7-10 day intervals then switch to a fungicide from another chemical group.
- Ensure that good coverage is achieved, including the underside of the leaves.
- DO NOT apply more than 4 applications per crop.
- DO NOT apply less than 7 days after the previous treatment.
- Add a non-ionic surfactant at the label rate.

Withholding Period:

Harvest: Do not harvest for 7 days after application.

Grazing: Do not graze or cut for stock food.

Jurisdiction:

All States and Territories, except VIC.

Note: Victoria is not included in this permit, as their Control-of-Use legislation means a permit is not required to legalise this off-label use in that State.

Additional Conditions:

This permit allows for the use of a product in a manner specified on the permit. Persons who wish to prepare for use and/or use products for the purposes specified in this permit must read, or have read to them, the details and conditions of this permit. Unless otherwise stated, the use of the product must be in accordance with the product label.

To Avoid Crop Damage:

The sensitivity of some species and varieties of the crops to be treated under this permit has not been fully evaluated. It is advisable, therefore, to only treat a small number of plants to ascertain their reaction before treating the whole crop.

Export of treated produce:

Maximum Residue Limits (MRLs) have been established to allow treated produce to be used for human and/or animal consumption. An MRL has been established for DIMETHOMORPH and MANCOZEB in SNOW PEAS. MRLs can be found in the *Agricultural and Veterinary Chemicals Code (MRL Standard) Instrument 2019*. MRLs apply only to produce marketed and consumed in Australia. If treated produce is to be exported, residues must not exceed the limits/tolerances of the importing country.

Issued by the Australian Pesticides and Veterinary Medicines Authority.
