Critical Use Comments:

- To be used in the event of a suspected or confirmed incursion only
- Apply a maximum two (2) applications per season using a calibrated boomspray, airblast or handgun or equivalent equipment
- Thorough coverage of all plant surfaces is important to obtain good control
- Dangerous to bees. DO NOT spray while bees are actively foraging on and around the treatment area. If there is potential for managed hives to be affected by the spray or spray drift, notify beekeepers 48 hours before spraying to move hives to a safe location. The risk to bees may be reduced by spraying in the early morning or late evening while bees are not foraging, provided that surface temperature inversion conditions are not present.
