PERMIT TO ALLOW MINOR USE OF AN AGVET CHEMICAL PRODUCT

FOR CONTROL OF THRIPS IN MANGOES

PERMIT NUMBER – PER84427

This permit is issued to the Permit Holder in response to an application granted by the APVMA under section 112 of the Agvet Codes of the jurisdictions set out below. This permit allows a person, as stipulated below, to use the product in the manner specified in this permit in the designated jurisdictions. This permit also allows any person to claim that the product can be used in the manner specified in this permit.

THIS PERMIT IS IN FORCE FROM 20 NOVEMBER 2017 to 30 NOVEMBER 2022

Permit Holder:

AUSTRALIAN MANGO INDUSTRY ASSOCIATION
c/- AgAware Consulting Pty Ltd
21 Rosella Avenue
STRATHFIELDSAYE VIC 3551

Persons who can use the product under this permit:

Persons generally.

CONDITIONS OF USE

Product to be used:

DUPONT LANNATE-L INSECTICIDE [APVMA No. 60658]

PLUS OTHER REGISTERED PRODUCTS

Containing: 225 g/L METHOMYL as their only active constituent.

Directions for Use:

Crop Type	Insect Pest	Application Rate
MANGOES	Redbanded thrips Chilli thrips Banana flower thrips Tomato thrips	200 mL product / 100 L water

Critical Use Comments:

- Apply as a foliar cover spray from late flowering to early fruit set.
- DO NOT apply after early fruit set.
- Ensure thorough coverage of all branches, foliage, flowers and developing fruit.
- Apply using a standard orchard air mist application or equivalent. Only use correctly calibrated application equipment.
- DO NOT apply more than three (3) applications per season.
- Apply consecutive sprays at 10 – 14 day interval between applications.
- DO NOT apply if bees are actively foraging. Ensure beehives are removed from the area to be treated and from adjacent paddocks.
- To effectively manage thrips, methomyl based insecticides should be used as part of a broader program involving other products approved for the control of thrips in conjunction with appropriate pest monitoring and orchard hygiene.

Withholding Period:

Harvest: NOT REQUIRED when used as directed.

Jurisdiction:

NT and QLD only.

Additional Conditions:

This PERMIT provides for the use of a product in a manner other than specified on the approved label of the product. Unless otherwise stated in this permit, the use of the product must be in accordance with instructions on its label.

PERSONS who wish to prepare for use and/or use products for the purposes specified in this permit must read, or have read to them, the DETAILS and CONDITIONS of this permit.

To Avoid Crop Damage

It is expected that the methomyl based insecticide products to be used under this permit will be non-phytotoxic at the specified application rate. However, the sensitivity of some varieties of mango trees to be treated under this permit has not been fully evaluated under all growing conditions. It is advisable therefore to only initially treat a small number of trees and closely monitor plant health over the following days. Discontinue applications when any adverse symptoms post-treatment are observed.

Export of treated produce

To allow treated produce to be supplied or otherwise made available for human consumption a Temporary Maximum Residue Limit (TMRL) has been established for Methomyl in Mangoes at 0.2 mg/kg. This TMRL applies only to produce marketed and consumed in Australia. If methomyl treated produce is to be exported, due account should be taken of the residue definition and residue limits/import tolerances of importing countries and that any residues must not exceed those requirements of the importing.
