**Critical Use Comments:**

**Pre-emergent IBS or PSPE** - Use IBS application when furrow seeding using knife points and press wheels and PSPE when application is made to flat surface following harrows and /or rolling of the paddock. Use low rates or avoid use in sandy textured soils or low rainfall environments-particularly in the northern wheat belt. Seed below herbicide band at 5cm. Application should be made to moist soil free of clods and residues from previous crops. Rain is required 7 to 10 days after application to activate the metribuzin.

**Post emergent** - Apply as an early post emergent application to crops up to the 3 node stage and when the weeds are up to 4 true leaf stage and not more than 120 mm in diameter.

**Withholding Period:**

DO NOT graze or cut for stock food or feed to poultry for 2 weeks after application

**Jurisdiction:**

WA only

**Additional Conditions:**

THIS PERMIT provides for the use of a product in a manner other than specified on the approved label of the product. Unless otherwise stated in this permit, the use of the product must be in accordance with instructions on its label.

PERSONS who wish to prepare for use and/or use products for the purposes specified in this permit must read, or have read to them, the details and conditions of this permit.

**TO AVOID CROP DAMAGE:**

The sensitivity of some species and varieties of the crops to be treated under this permit has not been fully evaluated. It is advisable, therefore, to only treat a small number of plants to ascertain their reaction before treating the whole crop.
