Critical Use Comments:

- Apply at first signs of infestation.
- Apply a maximum of one (1) application per crop using calibrated knapsack sprayer or boom sprayer or similar equipment.
- Ensure thorough coverage of underside of leaves. Use of droppers will improve coverage of underside of leaves.
- DO NOT apply Imidacloprid or other Group 4A insecticides in consecutive sprays within and between seasons.
- Dangerous to bees. DO NOT spray any plants in flower while bees are foraging.
- Rotate with registered insecticides from other Mode of Action (MoA) groups.

Withholding Period:

Harvest: DO NOT harvest for 7 days after application.

Grazing: DO NOT graze or cut for stock food for 7 days after application.

Jurisdiction:

All States and Territories, except VIC.

Note: Victoria is not included in this permit, as their *Control-of-Use* legislation means a permit is not required to legalise this off-label use in that state.

Additional Conditions:

This permit provides for the use of a product in a manner other than specified on the approved label of the product. Unless otherwise stated in this permit, the use of the product must be in accordance with instructions on its label.

Persons who wish to prepare for use and/or use products for the purposes specified in this permit must read, or have read to them, the details and conditions of this permit.

Export of Produce:

Temporary Maximum Residue Limits (TMRLs) have been established to allow treated produce to be used for human consumption. A temporary MRL has been established for Imidacloprid in Podded pea (young pods) [snow and sugar snap]. MRLs can be found in the *Agricultural and Veterinary Chemicals Code Instrument No. 4 (MRL Standard)*. MRLs apply only to produce marketed and consumed in Australia. If treated produce is to be exported, residues must not exceed the limits/tolerances of the importing country.
