**Australian Pesticides and
Veterinary Medicines Authority**

**PERMIT TO ALLOW MINOR USE OF A REGISTERED AGVET CHEMICAL
PRODUCT FOR CONTROL OF ANTHRACNOSE IN OPEN HEAD LETTUCE VARIETIES**

PERMIT NUMBER – PER81131

This permit is issued to the Permit Holder in response to an application granted by the APVMA under section 112 of the Agvet Codes of the jurisdictions set out below. This permit allows a person, as stipulated below, to use the product in the manner specified in this permit in the designated jurisdictions. This permit also allows the Permit Holder and any person stipulated below to claim that the product can be used in the manner specified in this permit.

THIS PERMIT IS IN FORCE FROM 02 FEBRUARY 2016 TO 31 DECEMBER 2028

Permit Holder:

HORTICULTURE INNOVATION AUSTRALIA LTD
Level 7, 141 Walker Street
NORTH SYDNEY NSW 2060

Persons who can use the product under this permit:

Persons generally

CONDITIONS OF USE

Products to be used:

OCTAVE WP FUNGICIDE (APVMA No. 30485)

PLUS OTHER REGISTERED PRODUCTS

Containing: 462g/kg PROCHLORAZ PRESENT AS THE MANGANESE CHLORIDE COMPLEX g/L as the only active constituent.

Directions for Use:

Crop	Disease	Rate
Leafy / Open-Head Lettuce (field only)	Anthraco nose <i>(Microdochium panattonianum)</i>	200 g/ha

Critical Use Comments:

- Apply as foliar spray in a spray volume of 800L/ha.
- Ensure spray application provides good coverage of plant foliage, spraying near to but below the point of run-off.
- DO NOT apply more than 4 applications per crop.
- DO NOT apply more than 2 consecutive sprays before changing to a different fungicide group. Apply in accordance with the relevant Resistance Management Strategy for fungicides. To avoid resistance build up, the product should be rotated with other approved fungicides from different chemical groups.
- Apply at retreatment interval of 7 to 14 days.
- Use the shorter interval when continual wet, cloudy conditions favour disease development.
- DO NOT apply under weather conditions or from spraying equipment which could be expected to cause spray drift onto adjacent crops, crop lands, pastures or livestock.
- DO NOT treat produce destined for export market.

Advisory information on potential taste tainting of treated produce:

Prochloraz is known to cause taste tainting under certain conditions. In considering this permit, the APVMA has been provided with only limited taint data for prochloraz on leafy lettuce. The permit holder has been requested to monitor produce treated under this permit for possible taste taint effects. Users should be mindful of the possibility for tainting of lettuce. The APVMA recommends that users considering this treatment only treat a small number of plants to ascertain effects before treating the whole crop.

Any reports of taste taint resulting from the use under this permit should be reported to the Permit holder for further action.

Withholding Period:

Harvest: DO NOT harvest for 7 days after application.

Grazing: DO NOT feed treated crop to livestock, or allow livestock to graze treated areas.

Jurisdiction:

All States and Territories, except VIC.

Note: Victoria is not included in this permit, as their Control-of-Use legislation means a permit is not required to legalise this off-label use in that State.

Additional Conditions:

This permit allows for the use of a product in a manner specified on the permit. Persons who wish to prepare for use and/or use products for the purposes specified in this permit must read,

or have read to them, the details and conditions of this permit. Unless otherwise stated, the use of the product must be in accordance with the product label.

The holder of the permit must notify the APVMA of new information, including relevant information in accordance with section 161 of the Schedule to the *Agricultural and Veterinary Chemicals Code Act 1994*, in accordance with the obligation imposed by that section.

To Avoid Crop Damage

The sensitivity of the crop to be treated under this permit has not been fully evaluated. It is advisable to only treat a small area to ascertain the reaction before treating the whole crop.

Issued by the Australian Pesticides and Veterinary Medicines Authority

Note: 10/05/2018: Permit amended to update holder details. Permit issued as version 2.

Note: 04/10/2018: Permit expiry date extended to 31 December 2023 and update critical comment wording. Permit issued as version 3.

Note: 05/10/2023 – Additional conditions updated to current standards. S161 statement added. Permit expiry extended to 31/12/2028. Permit issued as Version 4.
