

PERMIT TO ALLOW MINOR USE OF AN AGVET CHEMICAL PRODUCT
FOR CONTROL OF ANTHRACNOSE AND GREY MOULD ON BLUEBERRIES

PERMIT NUMBER – PER84891

This permit is issued to the Permit Holder in response to an application granted by the APVMA under section 112 of the Agvet Codes of the jurisdictions set out below. This permit allows a person, as stipulated below, to use the product in the manner specified in this permit in the designated jurisdictions. This permit also allows any person to claim that the product can be used in the manner specified in this permit.

THIS PERMIT IS IN FORCE FROM 29 JANUARY 2018 TO 31 JANUARY 2023.

Permit Holder:

AUSTRALIAN BLUEBERRY GROWERS ASSOCIATION INC.
C/o Horticulture Innovation Australia Limited
Level 8, 1 Chifley Square
SYDNEY NSW 2000

Persons who can use the product under this permit:

Persons generally.

CONDITIONS OF USE

Product to be used:

SWITCH FUNGICIDE

Containing: 375 g/kg CYPRODINIL

250 g/kg FLUDIOXONIL as the only active constituents.

Directions for Use:

Crop Type	Plant Disease	Application Rate
BLUEBERRIES (field and protected cropping systems)	GREY MOULD (<i>Botrytis cinerea</i>) ANTHRACNOSE (<i>Gloesporoides</i> spp.)	800 g - 1.0 kg product / ha or 80 - 100 g product / 100 L

Critical Use Comments:

- Apply as a protectant treatment at the first signs of infection or at early stages of flower, fruit or foliage development prior to, or at the onset of disease.
- DO NOT exceed a maximum of four (4) sprays per crop per season, with no more than two (2) applications sequentially (7-14 days apart) before using another fungicide from another MoA chemical group for two (2) applications.
- Apply using calibrated airblast sprayer or equivalent spray equipment.
- Adhere to all label Restraints.

Withholding Period:

Harvest: DO NOT harvest for 7 DAYS after application.

Jurisdiction:

All States except Vic.

Note: Victoria is not included in this permit because their 'control-of-use' legislation means that a permit is not required to legalise this off-label use in that State.

Additional Conditions:

This Permit provides for the use of a product in a manner other than specified on the approved label of the product. Unless otherwise stated in this permit, the use of the product must be in accordance with instructions on its label.

Persons who wish to prepare for use and/or use products for the purposes specified in this permit must read, or have read to them, the Details and Conditions of this permit.

To avoid host damage:

The sensitivity of all blueberry cultivars to be treated with cyprodinil and fludioxonil under this permit has not been fully evaluated under all growing conditions. It is advisable to initially only treat a small area of blueberry bushes and closely monitor plant health. Discontinue applications when any adverse symptoms post-treatment are observed.

Export of produce:

To allow treated produce to be supplied or otherwise made available for human consumption, temporary Maximum Residue Limits (MRLs) have been established for Cyprodinil and Fludioxonil in Blueberries each at T3 mg/kg. These temporary MRLs apply only to produce marketed and consumed in Australia. If treated produce is to be exported, due account should therefore be taken of the residue definition and residue limits/import tolerances of importing countries and that any residues must not exceed those requirements of the importing country.

Issued by Australian Pesticides and Veterinary Medicines Authority
