

**PERMIT TO ALLOW MINOR USE OF A REGISTERED AGVET CHEMICAL
PRODUCT**

FOR THE CONTROL OF BAHIA GRASS AND FIREWEED

PERMIT NUMBER – PER87436

This permit is issued to the Permit Holder in response to an application granted by the APVMA under section 112 of the Agvet Codes of the jurisdictions set out below. This permit allows a person, as stipulated below, to use the product in the manner specified in this permit in the designated jurisdictions. This permit also allows any person to claim that the product can be used in the manner specified in this permit.

THIS PERMIT IS IN FORCE FROM 24 APRIL 2019 TO 30 APRIL 2024

Permit Holder:

NORTH COAST LOCAL LAND SERVICES
Level 1, 30 Park Ave
COFFS HARBOUR NSW 2450

Persons who can use the product under this permit:

Persons generally.

CONDITIONS OF USE

Product to be used:

LYNX WG HERBICIDE (APVMA No. 59851)

PLUS OTHER REGISTERED PRODUCTS

Containing: 600 g/kg METSULFURON-METHYL as the only active constituent.

Directions for Use:

Crop	Weeds	Rate
Pastures, roadsides, non-crop areas, rights-of-way, forests, reserves and bushlands.	BAHIA GRASS (<i>Paspalum notatum</i>) FIREWEED (<i>Senecio madagascariensis</i>)	Boomspray: 40 g/ha OR Spot-spray: 10 g/100L

Critical Use Comments:

- Apply only ONE application per year. For best results, apply in Autumn.
- Boomspray: in a volume of 100L water per hectare.
- Spot spray: with powered handgun/knapsack in at least 1000L water per hectare.
- Peak control may take 3 to 6 months, particularly for Bahia grass.
- A follow-up application should be made the following year to control plants and seedlings that survived the initial application.
- DO NOT apply product or drain/flush equipment on or near desirable trees/plants and their roots.
- DO NOT apply under weather conditions or from spraying equipment that may cause spray drift onto nearby susceptible plants, crops, cropping lands or pastures.
- DO NOT contaminate streams, rivers or waterways with the chemical or used containers.
- Refer to product label for information on resistance management.
- A nil withholding period is applicable. However, it is recommended not to graze treated areas for 3 days to ensure product efficacy.

Note: legume components of pasture will die. Desirable grass species may be temporarily set-back for one month.

This treatment is not suited to areas that have more than 80% ground cover of Bahia grass. A competitive pasture (at least 20% ground cover) must be present to provide competition after Bahia grass is controlled. Treated pastures must be rested or only be grazed lightly to facilitate maximum pasture establishment. Pasture improvement (fertilisers and sowing of competitive varieties) will assist long-term control.

Jurisdiction:

NSW ONLY.

Additional Conditions:

This permit provides for the use of a product in a manner other than specified on the approved label of the product. Unless otherwise stated in this permit, the use of the product must be in accordance with instructions on its label. Persons who wish to prepare for use and/or use the products for the purposes specified in this permit must read, or have read to them, the details and conditions of this permit.

Issued by the Australian Pesticides and Veterinary Medicines Authority
