Critical Use Comments:

- Apply by ground or aerial application when the pest first appears.
- Use the higher rate if longer residual control is required.
- Add a non-ionic surfactant at registered label rates.
- Apply in a spray volume of 50 – 200 L/ha (ground application), or minimum 30 L/ha for aerial application.
- DO NOT apply more than four (4) applications per crop, with a minimum retreatment interval of 7 – 14 days.
- Comply with the 'Precautions', 'Protections', 'Resistance' and 'Safety Directions' statements on the product label.

Withholding Period:

Harvest: Do not harvest for 7 days after application.

Grazing: Do not graze or cut for stock food for 14 days after application.

Jurisdiction:

All States and Territories, except VIC.

Note: Victoria is not included in this permit, as their Control-of-Use legislation means a permit is not required to legalise this off-label use in that State.

Additional Conditions:

This permit allows for the use of a product in a manner specified on the permit. Persons who wish to prepare for use and/or use products for the purposes specified in this permit must read, or have read to them, the details and conditions of this permit. Unless otherwise stated, the use of the product must be in accordance with the product label.

To Avoid Crop Damage

The sensitivity of the crop to be treated under this permit has not been fully evaluated. It is advisable to only treat a small area to ascertain the reaction before treating the whole crop.

Export of treated produce

Maximum Residue Limits (MRLs) have been established to allow treated produce to be used for human and animal consumption. An MRL has been established for CYPERMETHRIN in CEREAL GRAINS and PRIMARY FEED COMMODITIES. MRLs can be found in the *Agricultural and Veterinary Chemicals Code (MRL Standard) Instrument 2019*. MRLs apply only to produce marketed and consumed in Australia. If treated produce is to be exported, residues must not exceed the limits/tolerances of the importing country.
