Veterinary Medicines Authority**

**PERMIT TO ALLOW EMERGENCY USE OF A REGISTERED AGVET CHEMICAL
PRODUCT FOR CONTROL OF FALL ARMYWORM IN PEANUTS**

PERMIT NUMBER – PER90577

This permit is issued to the Permit Holder in response to an application granted by the APVMA under section 112 of the Agvet Codes of the jurisdictions set out below. This permit allows a person, as stipulated below, to use the product in the manner specified in this permit in the designated jurisdictions. This permit also allows the Permit Holder and any person stipulated below to claim that the product can be used in the manner specified in this permit.

THIS PERMIT IS IN FORCE FROM 19 JANUARY 2021 TO 31 JANUARY 2024

Permit Holder:

AUSTRALIAN OILSEEDS FEDERATION INC
30 Coronga Crescent
KILLARA NSW 2071

Persons who can use the product under this permit:

Persons generally.

CONDITIONS OF USE

Products to be used:

STEWARD EC INSECTICIDE (APVMA No. 59573)

Containing: 150 g/L INDOXACARB (99:1) (equivalent to 150 g/L active S-isomer) as the only active constituent.

RESTRAINT:

DO NOT apply if rain is expected within 2 hours of application, or if heavy dew is present on crops.

DO NOT apply when wind speed is less than 3 and greater than 20 kilometres per hour or during weather conditions when surface temperature inversions can develop.

DO NOT apply within 50 m (aerial application) or 20 m (ground application) when there are livestock, pasture or any land that is producing feed for livestock downwind from the application area.

Directions for Use:

Crop	Pest	Rate
Peanuts	Fall Armyworm (<i>Spodoptera frugiperda</i>)	300 – 500 mL/ha

Critical Use Comments:

- Regularly scout crops to monitor for eggs and larvae. Target sprays against eggs and newly hatched larvae (prior to third instar stage) before they become entrenched.
- Apply by ground boomspray or aircraft.
- Use a minimum spray volume of 100 L/ha for ground application and 30 L/ha for aerial application.
- DO NOT apply more than 2 applications per crop.
- DO NOT apply less than 7 days after the initial treatment.
- Comply with the 'Precautions' and 'Protections' statements on the product label.
- Refer to the Insecticide Resistance Management (IRM) on the product label to prevent or delay the development of insecticide resistance.

Withholding Period:

Harvest: Do not harvest for 14 days after application.

Grazing: Do not graze or cut for stock food for 14 days after application.

Livestock Destined For Export Markets

The label withholding period for grazing only applies to stock slaughtered for the domestic market. Some export markets apply different standards. To meet these standards, ensure that the Export Slaughter Interval or the Export Grazing Intervals is observed before stock are sold or slaughtered.

Export Slaughter Interval (ESI) – 49 days: After observing the grazing withholding period, livestock that has been grazed on or fed treated maize cereals forage and/or fodder should be placed on clean feed for 49 days (7 weeks) prior to slaughter.

Jurisdiction:

QLD and NT only.

Additional Conditions:

This permit allows for the use of a product in a manner specified on the permit. Persons who wish to prepare for use and/or use products for the purposes specified in this permit must read, or have read to them, the details and conditions of this permit. Unless otherwise stated, the use of the product must be in accordance with the product label.

Export of treated produce

Maximum Residue Limits (MRLs) or Temporary Maximum Residue Limits (TMRLs) have been established to allow treated produce to be used for human and/or animal consumption. An MRL has been established for INDOXACARB in PEANUT and PEANUT FODDER. MRLs can be found in the *Agricultural and Veterinary Chemicals Code (MRL Standard) Instrument 2019*. MRLs apply only to produce marketed and consumed in Australia. If treated produce is to be exported, residues must not exceed the limits/tolerances of the importing country.
